5. PRESENT STATE OF THE ART

Briefly describe the closest already-known technology that relates to the invention. This would include, for example, already existing products, methods or compositions which are known to you personally or through descriptions in publications or patents.

Internet Server Host Companies have provided solutions for balancing incoming client requests using Round-Robin, minimum bandwidth delivered, current CPU load, current number of open network connections.

6. ADVANCEMENT IN STATE OF THE ART

Briefly describe the unique advancement achieved by the invention. This may be done, for example, by describing a problem with the prior art that is solved or specific objects that are achieved by the invention.

This invention is unique — instead of considering a single or multiple aspects (as mentioned above) of host load conditions, it uses a well-formulated set of Rule-base considering all aspects of host conditions. The Rule Base can be fine-tuned to increase the efficiency for a particular type of Internet service.

7. HOW ACHIEVED

Briefly describe the invention and how it achieves the advancement described in paragraph 6.

A Fuzzy Logic-base set of Rules has been formulated to intelligently make a Server selection from a group. Given a set of input values, the Rule Base is used to derive a selection index for each Server in the group. The Server with the largest index is the selected server for the newly arrived Client request.
